DETAILED ACTION

Allowable Subject Matter

Claims 1 and 3 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or otherwise suggest an oil-impregnated sintered sliding bearing made of a porous iron-based sintered quenched alloy with martensitic structure with a copper mass percentage of 15 to 25 percent which provides improved wear resistance owing to its structure, because the soft copper phases have good conformability to a shaft with the hard iron-carbon based alloy providing durability, said bearing further having axially wavy, ridge-and-groove lines surface having a height difference of 2 to 12.5 micrometers wherein the outer layer of said bearing surface is densified to the depth of 10 to 60 micrometers such that the pore openings are blocked up by 1 to 10 % by area, which is to say the number of pores near the outer layer of the bearing surface is made smaller than those in the inside portion of the bearing body to the aforementioned depth of 10 to 60 micrometers, thereby allowing initial friction and wear upon the bearing surface to eventually erode the outer layer releasing lubrication within the inside portion of the bearing body.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
